

IT'S A MATTER OF CULTURE!

This year once more our maple production team pursues its growth to serve you better. Today more than 50 distributors located in Canada and in North-Eastern United States work to maintain this customer-relationship that has been uniting us for many years now. In order to make our products even more available for our distributors, we have opened two distribution centers: one in the Beauce region and the other one in the Temiscouata region, a place of great agricultural potential.

We are very proud to offer more than 40 new products this year, among which 29 are manufactured by our team at our Ham-Nord plant. Innovation is still a major driving force to our growth, as

shown by the increasing enthusiasm of the maple production industry towards the High Brix technology, patented by H2O Innovation in 2016. The Smartrek™ technology, that has generated the installation of more than 12,000 housings in the woods over the last 4 years, is more and more popular and proves to be a must-have in the improvement of maple syrup output.

Our team works on two priorities which will guarantee us a sustained growth: integrity and service. For that matter the recall of our Smartrek™ sensors last year gives evidence that our organization definitely wants to offer you trustworthy equipment, even in case of default.

For us, quality, customer satisfaction, honesty and transparency are a matter of corporate culture. Only this way do we consider business. This is how H2O Innovation makes sure of its durability and a sustained growth.

We are thankful for your continued trust.

H20 Innovation's fittings with the logo mentionning "without micro leaks" have been made with a different process, which has as benefit of having no plastic molding line on the last barb. A while ago, when producers used less effective vacuum pumps, this detail was not important. Although, since a few years, vacuum pumps are much more performing therefore it is essential to avoid any kind of leaks, as small as they come!

- Creates a natural vacuum
- Inexpensive installation: no need for an extractor nor a vacuum pump
- Possibility to obtain a vacuum of up to 27 inHg
 3 main criteria to obtain a natural vacuum:
- Have a leak-free line
- Have an elevation between the first tap and the main line
- Have a height difference to create the suction effect (a minimum of 30 ft. is necessary to create the high vacuum effect)

The H2O main line is now offered in 2 materials. Made of polyethylene specially developed for maple farms, the regular model has always been installed by producers. The new MD (Medium Density) model has less material but denser wall. This product is thus more affordable and just as reliable. It offers a greater resistance to pressure, but its use is not recommended in cold climates.

The H2O Innovation tubing range offers a variety of models for all tastes. As its name suggests, the Flex 15-year guarantee is more flexible and benefits from an excellent memory. It will quickly get back to its initial position following an incident. The Flex is now offered in blue or grey. The Semi-rigid green 10-year guarantee is more rigid than the Flex, thus better supporting ice or snow loads.

Tubing H20 Innovation 5/16" tubing

Description
Blue H2O Innovation flex tubing, 5/16", 500 ft., 15 years
Green H2O Innovation semi-rigid tubing, 5/16", 500 ft., 10 years
Purple H20 Innovation semi-flex tubing 5/16", 500 ft., 10 years
Green H2O Innovation semi-rigid tubing, 5/16", 500 ft., 8 years
Royal blue H2O Innovation semi-rigid tubing, 5/16", 500 ft., 8 years
Grey H2O Innovation flex tubing, 5/16", 500 ft., 15 years

The medium density (MD) main line offered by H2O Innovation is an in-between the regular and HD main line. Its rigidity makes it an affordable option and its flexibility is ideal for all type of installations.

Main-line

H2O Innovation's high-quality tubing is designed to meet maple producers' standards. The slick material that is used reduces the development of bacteria and facilitates cleaning. The blue main line does not warm up as fast as the black main line, thus slowing bacteria growth. Laced tubing option available upon request.

H2O-Smartrek * technology The easy way to monitor your leaks

The H2O-Smartrek[™] leak monitoring system is without a doubt the most efficient and advantageous one on the market. This reliable system is appreciated by the producers that have adopted it. The data collected by the sensors is transmitted via radio waves to an application that reads the information and sends you complete and easy-to-understand reports.

These reports, created in real-time, allow you to identify the location of your leaks and efficiently manage your employees assigned to that task. You can also visualize the performance of your equipment and production along with measuring your yield increase per tap. The number of sensors can be increased as your installation grows. Moreover, H2O Innovation offers you an exceptional technical assistance. But it's so easy to use, you won't need it.

H2O-Smartrek™

Starting kit

ERAPRMAP-KIT

Starting kit - 8" tablet, long-range gateway, programmed

ERAPRMAP-KIT2 Starting kit - 18" tablet, long-range gateway, programmed

Characteristics

 The starting kit is the brain of the H2O-Smartrek[™] system. It acts as a bridge between the tablet (Bluetooth option) and the radio network. ERAPRMAP-GAT and SAM550708

Characteristics

 The vacuum sensor records the vacuum level and allows you to identify leaks.
 The sensor is highly precise at 0.10 inHg.
 If installed at the end of a main line, the sensor will also indicate the temperature.

ERAPRMAP-VAC-1 Vacuum sensor - single port (batteries included)

ERAPRMAP-VAC-2 Vacuum sensor - double port (batteries included)

Characteristics

• The vacuum sensor – double port records the vacuum level and allows you to identify leaks. The sensor is highly precise at 0.10 inHg. When installed between 2 main lines, it will record 2 different vacuum measures. The sensor also records the temperature.

ERAPRMAP-REL

Relay - remote control

Characteristics

• The remote-control relay allows the control of two different electrical equipment, either manually or remotely, using a wireless network. The relay is compatible with all electrical installations (120 V, 240 V, 600 V, etc.).

ERAPRMAP-LEV

Sensor - tank level 120 V

ERAPRMAP-LVLB

Sensor - tank level (batteries included)

Characteristics

• The tank level sensor measures the sap level using ultrasounds. Since there is no direct contact with the sap, its use is hygienic.

ERAPRMAP-HAN

Gateway for mobile

Characteristics

 The gateway for mobile connects to an Android mobile device. It gives you access to all data and information of your entire network, wherever you are, even while you are coping with the leaks.

ERAPRMAP-GAT

Gateway - long range

 Since the gateway for mobile uses radio waves, there is no need for a cellphone or an internet network. Thanks to this equipment the employees assigned to leak monitoring can communicate with each other using text messages.

operation."

- Dr. Timothy Perkins Director / Professor

University of Vermont, VT

Timothy Perkins Proctor Maple Research Center

"An adequate vacuum is crucial in achieving high sap

production. We can't mon-

itor every part of the woods through the entire season – but H2O-Smartrek[™] can. It has become a key part of our

Characteristics

• Communication within the system is orchestrated by a single equipment: the long-range gateway. All the information and measurements gathered by the different sensors on the network are sent to the gateway. It then prioritizes the speed and order in which to send the information on the wireless network.

ERAPRMAP-REP

Repeater (batteries included)

Characteristics

 The repeater is used when the distance between two sensors is too big or when an elevation in the landscape may block the radio waves.

The repeater takes no measurements. It receives and transmits information to all the other sensors in range using radio waves.

Flowmeters

Product No.	Model	Min. flow (GPM)	Max flow (GPM)	Nominal flow (GPM)

ERAPRMAP-INDUSLS

Ultrasound industrial level

Characteristics

• High power ultrasound industrial level with self-cleaning cycles for challenging environments Liquids, pellets and powder can be measured.

ERAPRMAP-PIEZ

Piezometer - Cable \$2.70/ft.

Characteristics

 Water column monitoring, usually in wells. Three measurement modes: water column, drawdown, water depth. Barometric compensation. Battery service life: 3 ¹/₂ years for the sensor probe / 7 years for the sensor head.

Available measuring ranges: 10 m / 30 m / 60 m / 120 m

ISMARTJREK TECHNOLOGIES

ERAPRMAP-PRES

Vacuum monitoring in a liquid medium, NPT 1/4

Options

- -1 0 bar (the vacuum is often used in farming to monitor ground pressure, when combined with a strain gauge)
- -14 100 psi
- 0 300 psi
- 0 1,000 psi
- Any other range upon request

FESSION

ERAPRMAP-PADFLO

Rotary chopper wheel flowmeter

Characteristics

• Flow and volume monitoring for piping from 1" to 4" diameter with relay

ERAPRMAP-ELECFLO

Electro-magnetic flowmeter - 3"

Electro-magnetic flowmeter – 4"

Characteristics

 Electro-magnetic flowmeter providing total and lot volume monitoring, reverse & forward running. Only the lot volume can be reset. Battery service life: 4 years.

Can be used with Seametrics IMAG4700 (version with battery) for a wireless optimal operation of the battery.

ERAPRMAP-CAM-BASE

Characteristics

Base kit

- 1 x 8-channel recorder with 1 TB hard drive
- 1 x 1.5 m Ethernet cable
- 1 x power supply
- 1 x USB mouse
- 1 x 1.8 m HDMI cable
- 4 x 720P cameras
- 4 x screw pkg
- 2 x 25 m Ethernet cable
- 2 x 15 m Ethernet cable
- 1 x installation guide
- 1 x warning sticker
- 1 x CD

ERAPRMAP-CAM

Surveillance system

Characteristics

- Monitor your maple farm at all times thanks to this new monitoring system using Foscam IP cameras. Choose high-quality picture and POE technology for a quick and easy installation of Foscam cameras.
- Thanks to its night vision function, the motion sensor will notify you day and night whenever it detects an intrusion.
- The advanced Foscam recording system allows easy playing of video replays.
- Connect a monitor to the management housing and enjoy live video.
- It is possible to make recordings using up to 8 cameras simultaneously.
- Record in HD over a period of more than 160 days with one camera only and the 4 TB hard drive (sold separately).
- Several options available to meet your needs.
- *Requires a fast Internet connection for a remote use. Contact us for more information. Installation not included.

Characteristics

• Stay in control and keep an eye on your system in case of power outage.

Several options available to meet your needs.

*Requires a fast Internet connection for a remote use. Contact us for more information. Installation not included.

NEW FUNCTIONS OF THE PORTABLE GATEWAY

(without cell phone network or Wi-Fi)

- Employees localization in real-time on the map
- Replay functionnality with timeline to analyze path
- Text communication by radio waves
- Work checkpoints on the map
- All pumps data and control while in the woods

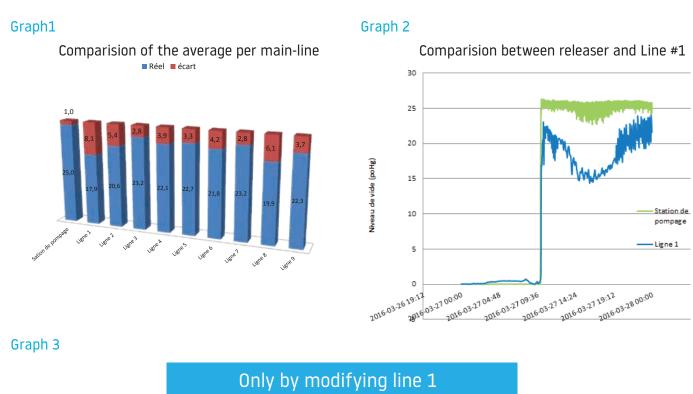

H2O-SMARTREK™, ENSURED PROFITABILITY

Ex: A producer has 9 main-lines linked to a pumping station. Graph #1 shows the annual average of the vacuum level of each of the main-lines (blue section) while comparing it to the vacuum level of the pumping station. The red section represents the difference between the target value of 26 inHg and the real average of each main-line. We can see that line #1 has an average of 17.9 inHg. This represents 8 inHg less than the target value of 26 inHg. The main-line diameter is undersized as shown on Graph #2 as there is a drop of vacuum at the moment of the day where the casting is at its best.

According to the performance in pounds per tap and the number of trees attached to this main-line, and considering that for each additional inHg the water supply is increased by 5% we can conclude that changing the main-line will provide an additional income of approximately \$4 000 for the year (Graph #3).

H2O Innovation continuous vacuum extractors are the best option available on the market. When sap accumulates inside the extractor, the float activates the submersible pump. They offer many benefits:

- No moving back of the sap in the main-line
- No ambient air introduced into the system (vs. mechanical releaser)
- Mechanical float: simple & efficient
- Easy maintenance
 - Pump ¹/₂ HP with low consumption
 - Can be used up to 29.5 inHg
- Manometer included
- Automatic wash systems available

Vertical extractor 1236

Product No.	Description	Dimensions	Tap capacity	Elevation	Height	Input
ERARELH201236HVC	1-pump vertical extractor 30 gpm	12" x 36"	15 GPM @ 28 inHg	10 feet	21"	2 x 2"
ERARELH201236HVC-M	1-pump vertical extractor 30 gpm with pre-punched 6" x 27" manifold	12" x 36"	15 GPM @ 28 inHg	10 feet	27.5"	5 x 1" ^{1/4}

Known as the small one, this extractor has been designed for high vacuum levels. The integrated 30 gpm pump will feed most of the 5,000-tap facilities. The top lid offers an easy access to the internal components, allowing a quick and efficient cleaning. Moreover, it drains really fast through the bottom valve. Thanks to its optional input collector 6" x 27" this model is economical and flexible.

Horizontal extractor 1230

Product No.	Description	Dimensions	Tap capacity	Elevation	Height	Input
ERARELH201230HVC-H	1-pump horizontal extractor 30 gpm	12" x 30"	15 GPM @ 28 inHg	10 feet	21"	5 x 1 ^{1/4} "

Similar to the 1230HVC model, this brand-new product meets many of our clients' requirements. Horizontally designed, it easily fits on a basin for a temporary use in case of power failure. It also has the advantage of offering a very low sap input height when installed on the ground. Thanks to its easy access it can quickly be cleaned. The standard version is designed to feed a 5,000-tap maple farm

ERARELH2O1236HVC

ERARELH2O1236HVC-M

ERARELH20HY1824HVC	Hybrid 1-pump extractor 30 gpm (electrical with mechanical option)	18" x 24"	17 GPM @ 28 inHg	Tank	Tank	8 x 1 ^{1/4} "

1836HVC and 1836HVC-H

With the same advantages as smaller models, the 1836HVC is available in several versions. Depending on the number of taps of the producer, up to 3 pumps can be included. The 3-pump model is designed for 15,000-tap maple farms.

Alike the 1836HVC, this horizontal extractor can be installed on a basin in case of power failure.

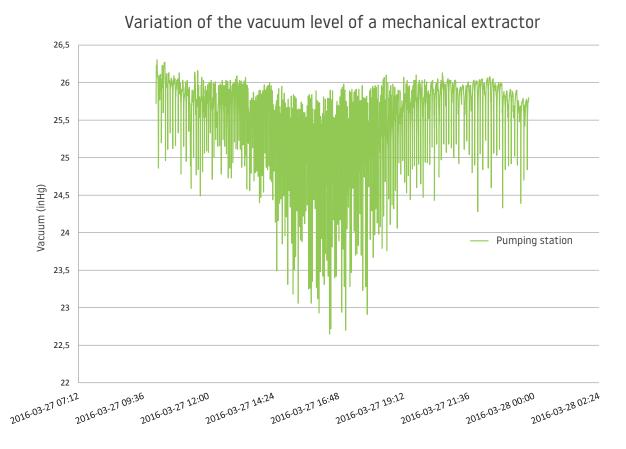

HY1824HVC

This extractor has all the advantages of electrical extractors and guarantees its owner an unmatched peace of mind. Installed on a basin, the integrated pump will do all the work. However, in case of an excessive run or unexpected breakage, the mechanical option will come in, thus allowing an increased operation safety.

ERARELH2OHYB1824HVC

Makes it possible to obtain a level of continuous vacuum preventing a drop each time the extractor releases.

Extractors options

Product No.	Description
ERARELIN	Customized manifold piercing: extractor price with manifold
ERARELIN	Extra piercing on releaser: extractor price without manifold
PEN-30D0M5221	Extractor pump 30 gpm

ERAREL30-6X27	Modification kit for mechanical releaser	-	-	-	-

Characteristics

 For maple farms operating 500 to 25 000 taps Efficient, reliable and not affected by frost Submersible pump included, the vacuum is never interrupted during a cycle. N.B. Additional fees apply for any modifications or options

It is possible to transform your mechanic extractor into an electrical one. It's also possible to add a pump to a mechanical releaser to transform it into a continuous vacuum extractor. Contact your H2O Innovation representative for more information.

Container & pumping station

Container new or used Available in 20' or 40' length 2" insulation plywood or white plastic finition 36" industrial door on the side in option

Skis in option

Exterior holes for aeration in option

Electricity input, electric plug, light, 240V heating

Plumbing & connection, tank, drain, pump, vacuum pump, etc.

Characteristics

• Containerized pumping station. Can include skis to transport on site, vacuum pump, releaser, moisture trap, tank, transfer pump, electrical pannel, Smartrek, lighting. All of these in a new or used container.

CUSTOM PROJECTS TURNKEY

Contact H2O Innovation Maple and start your project now!

H2O Innovation Maple is backed by a multidisciplinary engineering team experienced in membrane filtration and custom projects.

With this solid team, H2O Innovation Maple can help you accomplish that slightly crazy project you have in mind.

Our team can help you with :

- Mechanical engineering
- Architecture
- Sugarhouse layout
- Tubing set up

FINANCING OFFERED

CASE STUDY ÉRABLIÈRE DU NORD

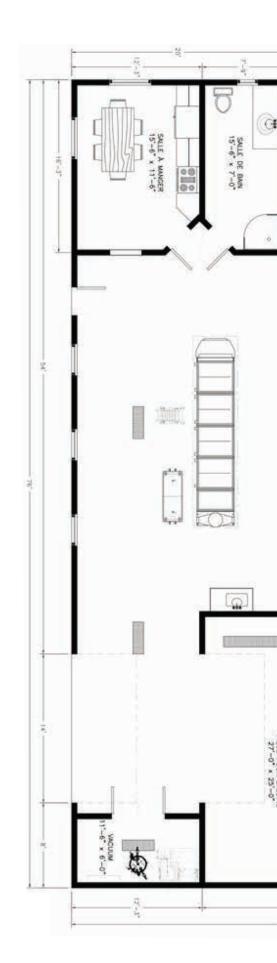

The Erablière du Nord maple farm is located in Trois-Rives in the Haute-Mauricie region and is owned by Mathieu Toupin, his wife Andréanne Guilbert and their associate Benoit Gingras.

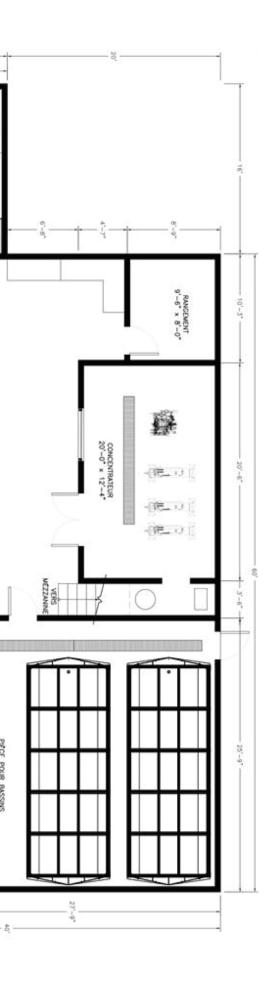

The H2O team, together with the Érablière Rémi Bolduc jointly designed this new 15 000 tap project as part of the awarding of new quotas on public lands. They will also deal with organic pre-certification.

This project is characterized by many specific challenges due to a rough & steep undulating terrain (many rifts & runs), which required more main-line and time than a "regular" facility. They ended up with nearly 3 500 working hours, including family and friends' assistance.

The facility will be equipped with High Brix equipment and ultimately with the H2O-Smartrek radio frequency monitoring system. The evaporator is a 3 $\frac{1}{2}$ ' x 16' finishing rig. The osmosis is a 5-vessel Econox with 2 High Brix vessels. The pumping system relies on 2 Travaini 10 HP vacuum pumps with 2 electrical releasers.

CALL US : (819) 344-2288

Oil-lubricated, these high-performance pumps can reach an incredible vacuum level close to the absolute vacuum (up to 29.9 inHg). They are silent, reliable and compact. For a leakproof gathering system, this pump is the No. 1 choice.

KWIK Lubricated Rotary Vane Vacuum Pumps - EM

Product No.	Description
ERAEM28B	H20 Innovation lubricated rotary vane vacuum pump with electrical engine 1.5 HP, 220/1/60
ERAEM63B	H20 Innovation lubricated rotary vane vacuum pump with electrical engine 3 HP, 220/1/60
ERAEM100B	H2O Innovation lubricated rotary vane vacuum pump with electrical engine 5 HP, 220/1/60
ERAEM140B	H20 Innovation lubricated rotary vane vacuum pump with electrical engine 7.5 HP, 220/1/60
ERAEM202B	H2O Innovation lubricated rotary vane vacuum pump with electrical engine 10 HP, 220/1/60
ERAEM202B-KIT	H20 Innovation lubricated rotary vane vacuum pump with electrical engine 10 HP, 220/1/60, skid-mounted with moisture trap and variable speed drive

ERAEM28B

ERAEM140B

ERAEM100B

• Equipped with lubricated rotary vanes, this compact pump is amongst the most reliable and profitable. The pump can reach 29 inHg.

KWIK Dry Rotary Vane Vacuum Pumps - DVV

Product No.	Description
ERADVV25	H20 Innovation dry rotary vane vacuum pump with electrical engine 1.5 HP, 220/1/60
ERADVV40	H20 Innovation dry rotary vane vacuum pump with electrical engine 2 HP, 220/1/60
ERADVV60	H20 Innovation dry rotary vane vacuum pump with electrical engine 3 HP, 220/1/60
ERADVV80	H20 Innovation dry rotary vane vacuum pump with electrical engine 5 HP, 220/1/60
ERADVV100	H20 Innovation dry rotary vane vacuum pump with electrical engine 5 HP, 220/1/60
ERADVV140	H20 Innovation dry rotary vane vacuum pump with electrical engine 7.5 HP, 220/1/60
ERADVV140/3	H20 Innovation dry rotary vane vacuum pump with electrical engine 7.5 HP, 220/3/60
ERADVV200	H20 Innovation dry rotary vane vacuum pump with electrical engine 7.5 HP, 220/1/60
ERADVV250	H20 Innovation dry rotary vane vacuum pump with electrical engine 10 HP, 220/1/60

Characteristics

• These vacuum pumps are built simply, which gives them sturdiness and durability. They generate low user and maintenance fees. Coupled with an oil-free operation, the different chambers are separated by rotary vanes with high longevity. These pumps can reach 25 inHg.

DFM220360.2X

Travaini pumps 3, 5, 7.5 & 10 HP Excellent performance at high vacuum

Excellent performance at high vacuum Variable speeds, silent engine, fully skid-mounted HAS A GREAT LIFE SPAN.

Product No.	Description
ERAVX-257	Complete pump with 3 HP engine - high vacuum (Max. vacuum of 28.5 Hg)
ERAVX257-KIT	Complete kit - Pump 3 HP - high vacuum and oil cooler
ERAVB40-110	Complete pump with 5 HP engine - high vacuum (Max. vacuum of 28.5 Hg)
ERAVB40-110-KIT	Complete kit - Pump 5 HP - high vacuum and oil cooler
ERASE40-100	Complete pump with 5 HP engine - medium vacuum (Max. vacuum of 26 Hg)
ERASE40-100-KIT	Complete kit - Pump 5 HP - medium vacuum and oil cooler
ERAVB40-150	Complete pump with 7.5 HP engine - high vacuum (Max. vacuum of 28.5 Hg)
ERAVB40-150-KIT	Complete kit - Pump 7.5 HP - high vacuum and oil cooler
ERASE40-150	Complete pump with 7.5 HP engine - medium vacuum (Max. vacuum of 26 Hg)
ERASE40-150-KIT	Complete kit - Pump 7.5 HP - medium vacuum and oil cooler
ERAVB40-200	Complete pump with 10 HP engine - high vacuum (Max. vacuum of 28.5 Hg)
ERAVB40-200-KIT	Complete kit - Pump 10 HP - high vacuum and oil cooler
ERASE50-220	Complete pump with 10 HP engine - medium vacuum (Max. vacuum of 26 Hg)
ERASE50-220-KIT	Complete kit - Pump 10 HP - medium vacuum and oil cooler

MEDIUM VACUUM SE series

HIGH VACUUM VB & VX series

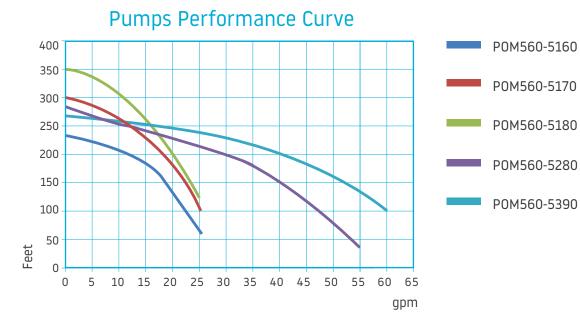

POM560-5170

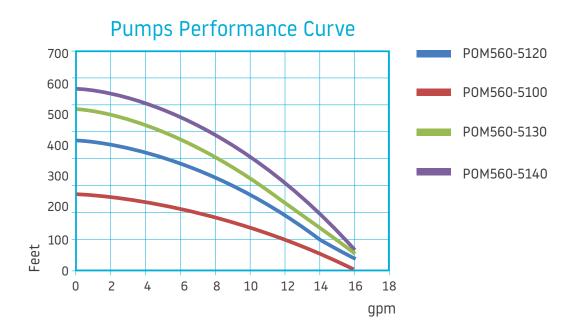

Overpressure pump

Characteristics

 Stainless steel head, frame and base 120 V, 240 V and 575 V 3 phase available
 Inlet and outlet 1 ¼" Maximum pressure of 320 psi No draw-in capacity
 From 300 to 4,800 gal./h
 Often used to carry water
 No flow on long distances
 ODP engine included
 TEFC engine optional

Product No.	Engine	Average flow	Max pressure
P0M560-5010	0.5 HP	300 gal./h @ 100 psi	140 psi

GVS Series

The GVS 20-300 series works according to the proven principle lubricated rotary vane pumps that have a proven track record in all vacuum applications in the industry. Robust and renown the GVS 20-300 series has an innovative design and technologically advanced.

Atlas Copco has equipped the GVS 20-300 range of innovative features that guarantee higher performance at lower operating costs. The ballast is integrated in series to avoid condensation. Other features, such as air-oil separation and anti-return mechanism are integrated, allowing continuous operation between 400 mbar (a) and their optimal pressure. Clean and efficient, the GVS 20-300 series oil separation system has been optimized to reduce oil vapors in the exhaust. The flapper inlet check prevents the vacuum pump from rotating in the opposite direction, in case of shutdown without ventilation. This device also protects the point of use against oil re-aspiration.

GHS Series

The GHS VSD+ Series is a range of new-generation, intelligent, oil-sealed rotary screw vacuum pumps with Variable Speed Drive (VSD) technology from Atlas Copco. Based on the well-known and durable plug-and-play design principles of Atlas Copco compressors, these vacuum pumps have been designed by vacuum engineers to deliver peak performance at your operating pressure.

These unique products offer:

- Superior performance against benchmarked oil-sealed and dry vane vacuum pump technologies
- Increased efficiency State-of-the-art screw technology, Variable Speed Drive (VSD) and innovative motor design combine to produce a leap forward in efficiency
- Quiet operation Operating noise is less disruptive than comparable technologies
- Sustainable productivity thanks to built-in efficiency
- Reduced environmental impact due to ultra-high oil retention at all operating pressures.

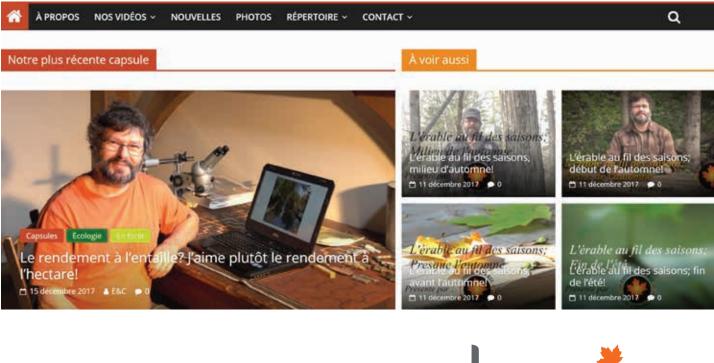

"The whole team at Érable & Chalumeaux is proud to have H2O Innovation Maple as sponsor. Since our beginning, they encouraged us so that our website would materialize and become a reality. They allowed us to continue our vlogs on maple farming of Stéphane Guay Biologist. Thank you!" - Stéphane Guay

The team would like to express gratitude to

www.erable-chalumeaux.ca

Sap tanks manufactured by H2O Innovation are made of extremely robust stainless steel grade 304 (20 ga.). Available in many sizes and capacities, our tanks offer guaranteed durability and solidity!

TANKS

RESEARCH & DEVELOPMENT : A SOLUTION TO THE VR5 SYRUP

In partnership with a maple farm, our research & development department has come up with an efficient treatment to the VR5 syrup. It consists in recirculating the sap in the tanks so that the raw product brews. Even though sap is filtered, the air injection was an important and risky factor and less tolerated in the community.

By using nozzles designed for this instance, the action of recirculating under pressure integrated to a 5-micron filtration system serves also as a tank washing system. The 2017 season's results were very convincing, resulting in no VR5 or VR4 syrup on a production of more than 6 lbs / tap. Therefore, even if exploiting the season to a maximum the quality remains.

* Available upon request: Tanks size range from 10' large & 36' long - Up to 14 000 gallons

Characteristics

 Highly robust steel structure Drain output High-quality finishing Overlapped joints for increased solidity TIG welding to facilitate cleaning Front and steps made of steel with 4 rails Codes ending with E: supports every 2', making tanks more solid

Optional

• PFH216-TP : Overflow 1 ¹/₂" or 2" PFH216-ECH : Interior or exterior ladder for tank Cover in option

A dedicated and strong team with advanced knowledge of reverse osmosis, H2O Innovation develops unique water treatment systems and equipment. These are used in municipal and commercial applications in North America and everywhere else in the world. It is that same knowledge and unique dedication that are applied to the development of our maple equipment. Our products dedicated to maple farming are technologically advanced, efficient and user-friendly. Moreover, our team is formed of experts that know the ins and outs of sugar making. By doing business with H2O Innovation, you are teaming up with a team of over 600 employees deployed around the world. We therefore have the answer to all your maple equipment needs!

ULTRAFILTRATION

Ultrafiltration clarifies maple water, which has the effect of removing all the impurities contained in it. The clarification by ultrafiltration is still fairly unknown by maple syrup producers, but among other things to disinfect sap for bottling process. This type of unit also applies to birch water. Ultrafiltration disinfection can also lengthen the waiting time in the tank of the filtered sap water by these membranes. The filtration unit allows to keep more than 98% of the water, unlike a reverse osmosis unit that operates at about 80%.

Clarifying machine by ultrafiltration (UF)

Product No.	Description
PFH-UF-1	Clarifier 10 gpm
PFH-UF-2	Clarifier 20 gpm
PFH-UF-3	Clarifier 30 gpm
PFH-UF-4	Clarifier 40 gpm

Filtration unit

Product No.	Description

MINI-RO

The Mini RO-4 is the smallest concentrator offered by H2O Innovation and the one that presents the best quality for price on the market. You won't find a better concentrator at a better price, guaranteed. It is capable of filtering up to 100 gal./hr and its capacity can be increased with the use of a 20" sediment filter. Easy to use, the Mini RO-4 is compact and requires little energy.

PFH-MINI-RO-4

The Mini RO-8 is a small concentrator on wheels built with the same parts as the bigger concentrators. Its great yield of 500 ga./hr is done with less energy. The Mini RO-8 will satisfy the serious producer.

PFH-MINI-RO-8

Product No.	Dimensions	Gal./hr	Membranes	Pressure pump	Volts / Amps.
PFH-MINI-RO-4	52" x 23" x 32"	100	1x4"	1.5 HP	230/11
PFH-MINI-RO-8	63" x 21" x 40"	500	1 x 8"	5 HP	230/32
PFH-MINI-RO-4G (fuel)	62" x 23" x 32"	100	1 x 4"	6.5 HP	_

CONCENTRATOR

Product No.	Dimensions	Gal./hr	Membranes	Pressure pump	Volts / Amps.
PFH-CONCENTRATOR 200/240V	21" x 52" x 52"	200	2 x 4"	1 HP	240/11
PFH-CONCENTRATOR 300/240V	30" x 52" x 52"	300	3 x 4"	1.5 HP	240/13

The Concentrator is a small reverse osmosis system developed for the maple producer getting started. This equipment can concentrate between 200 and 300 gallons / hour at up to 10 Brix while using 2 to 3 membranes. Everything has been thought of so you can save: its initial cost is low, it consumes very little energy and it is quite compact. The Concentrator is a reliable equipment that will allow the producer to perfect its technique. *Might contain lead

Ready to use, the Econox is easy to operate and offer the best quality – performance relation on the market. Quiet, this compact concentrator can execute a rinse-wash cycle in less than 1h in its integrated washing tank. The Econox can be increased and accept up to 7 membranes to reach 2 000 gallons/ hour. It's capacity can be increase once more as it is possible to modify it into a High Brix equipment. Moreover, this concentrator can be automated using the Smartrek Technology. The Econox will never let you down, even during the peak of the season. Furthermore, its compact design will allow you to use it in smaller concentration rooms.

*Approximative flow with a 2 °Brix sap at 46.4 °F (8 °C)

The Supra is the concentrator meant for the serious producer looking for a performant equipment that can process an important quantity of maple water. The Supra can concentrate between 1 600 and 6 000 gallons/hour using 4 to 21 membranes. Moreover, it is possible to concentrate while cleaning a portion of the system thanks to its redundant operation sequences. The Supra is a robust equipment that will offer a continuous production, even during high production periods. It is possible to modify the Supra to make into a Supra High Brix and to automate it using the Smartrek Technology.

100% Stainless steel pre-filter housing

Product No.	Description
BONBN1-W5L2	Pre-filter ousing only 5 X 20"
SPH-F0501	1 pre-filter housing with bypass valve
SPH-F0502	2 pre-filter housings with bypass valve
SPH-F0503	3 pre-filter housings with bypass valve

The bypass valve allows you to go around the main pre-filter when doing a wash so you won't clog up your system.

CREATOR OF THE HIGH BRIX TECHNOLOGY

PATENTED TECHNOLOGY

Let's develop the flavours!

This exclusive process developed by H2O Innovation is based on its advance knowledge of membrane filtration. The High Brix concentration process can concentrate up to 45° Brix in one or two passes. This is made possible by the addition of membranes and the use of more performant booster pumps. Since your concentrate comes out of the concentration phase at a high brix level, the evaporation process with flue pans is not necessary anymore. The concentration phase is therefore followed by the cooking process that takes place in the specially designed Finishing rig. There, the syrup is cooked slowly at equal temperature in the flat pans to empart a maximum of flavour.

This advanced technology is simple to use and grants you the ability to plan your production. The equipment using the High Brix technology is capable of concentrating a large quantity of maple water while saving you time and energy. Go on, make the change. It's worth it! Using a High Concentration machine will also allow you to save on your oil consumption. You will use only half the oil you would normally use with an evaporator if you use the finising rig. Our High Brix equipment are eligible to financial support.

With a refrigerated tank, the sap can be preserved for many days. The producers can thus enjoy a better quality of life. Thanks to the High Brix technology they can easily choose the boiling days based on their agenda, which grants them profitability and an incomparable flexibility. Depending on the finishing rig's dimensions, it is even possible to reach a production speed of more than 7 barrels per hour with only one evaporator.

.....

35° BRIX IN ONE PASS

Transform your Econox into an Econox High Brix. New booster pump and vessels optimize the performance of your regular Econox while maintaining all of its advantages.

Take advantage of the High Brix technology exclusive to H2O Innovation and increase your concentration capabilities today.

Econox High Brix

Product No.	Membranes	Pressure pump	°Brix	Volts / Amps.	GPH / °Brix

*Tested at 1 200 psi. Food grade. Custom sizes available.

EVAPORATORS

STARTING AT 3 500\$

THE ROOKIE

To perfect your technique

The Rookie evaporator is the smallest evaporator offered by H2O Innovation. Made entirely of stainless steel, this high quality design is similar to the bigger evaporators. This equipment is offered at a competitive price and is easy to operate. NEW

HOBBYIST

2' x 6' HP

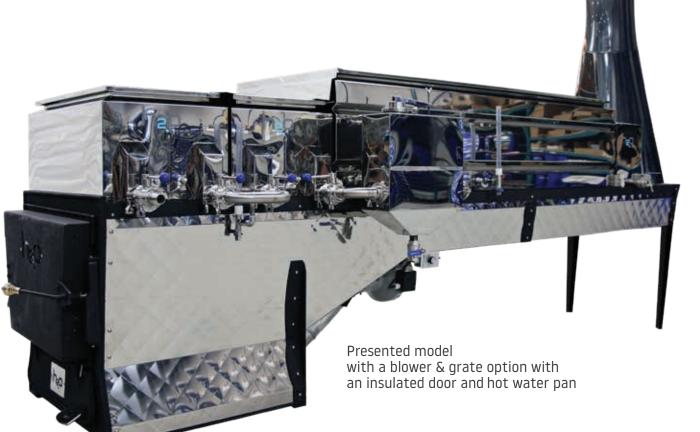

H2O-NEXT GEN For the sugar maker who is beginning

Next Generation evaporators are designed for all types of sugar makers, either with a manual system, or with control & float, you will manage to find what you need with this line. Made in USA. See www.nextgenmaple.com/evaporators for more details.

2' x 4'

TRADITION

STARTING AT 5 500\$

THE TRADITION

A tradition of quality

Recently reviewed and improved the solid conception of the Tradition teamed with stainless steel valves and a thick cast iron door make this evaporator ideal for all producers. Moreover, its float box includes a decantor to facilitate the elimination of sugar sand.

THE TSUNAMI A force of nature

Chrome adjustments gauge

The Tsunami evaporator is the biggest and best performing evaporator offered by H2O Innovation. Its optimized design makes it one of the best high performance evaporators on the market. The boiling is done continuously, without heat peaks, thanks to the constant temperature of the insulated combustion chamber.

This therefore allows for a continuous and stable flow. Moreover, this evaporator includes a fan with variable control to produce optimum combustion regardless of the type of wood used. The operation of the Tsunami is simple and allows you to maximize your work without requiring more effort. The efficiency of the Tsunami can be increased as it is possible to convert it into a High Brix finishing rig.

EVAPORATORS

CLASSIC

THE CLASSIC A timeless classic

The Classic, an oil evaporator is a highly reliable piece of equipment. The Classic is sold fully equipped and ready to use. It will offer you peace of mind on top of being easy to operate. The Classic evaporator can be modified to be used in conjunction with a High Brix concentrator.

The Carlin burner which it is equipped with is easy to adjust and has a low maintenance cost. Since this type of burner is popular amongst sugar makers, you will easily and quickly find an authorized technician in your area to help you.

«My wife and I have a maple farm and we use an H20 Innovation oil evaporator (3 x 10) with preheater and hoods for boiling. We also have a 3-vessel osmosis, 1 800 gal./h. Quality of equipment and service could not be higher. The RO easily treats the sap and the evaporator efficiently boils, which allows us to obtain a high-quality syrup year after year. Keep on with your great work!".

- LAMB FAMILY MAPLE Waterville, VT

FINISHING RIG

For well-developped flavours

Its patented technology of High Brix concentration makes this evaporator highly efficient, capable of producing between 20 and 130 gallons of syrup per hour.

It is also easy to clean as it has no flue pan and a pan cleaner can be fitted on top of the flat pans. Unique, the Finishing Rig will offer you a high quality syrup without the headache.

Oil finishing rig | 30° to 45° Brix

Product No.	Dimensions	Flat pan	Flue pan	Carlin burner	Stack diameter
PFH1322-1/2X10	2' 1/2 x 10'	2-30" x 48"	24" x 30"	601	12"
PFH1323-1/2X14	3' 1/2 X 14'	3-42" x 48"	24" x 42"	701	16"
PFH1325X14	5' x 14'	3-60" x 48"	24" x 66"	701	20"
PFH1326X14	6' x 14'	3-72" x 48"	24" x 72"	2 x 701	22"

*We now have 6 feet flue pans in option

RUTH & GLEN GOODRICH 200 000 taps

"Over the past year we have started to put together a new sugarhouse, the woods and facility are designed to handle up to 200 000 taps. We needed a very unique boiling system. Working together with the H20 team, we created a high tech R0 & Evaporator system.

The 20' x 7' High Brix evaporator will be boiling 30 percent concentrated sap this coming season. High efficiency, easy cleaning and maximum control of finished product is the goal"

- RUTH & GLEN GOODRICH Eden, VT

Even Flow thermoregulator

Product No.	Description
ERATHEH20PB	Even Flow auto

Even Flow automatic valve controller with barometric control box

Price \$1 595.00

Characteristics

• In order to control efficiently the temperature of your equipment, the thermoregulator includes a barometer and a fast engine. Its user-friendly interface will facilitate your work and so will its quality connections. For every 1/10 of a degree Farenheit over the targetted value, the valve opens of 10%.

Characteristics

• All our models of bottles are sold exclusively in cases of 12. Caps not included, sold separately

BOTTLE YOUR SYRUP QUICKLY AND WITHOUT A MESS

User-friendly, this bottling equipment includes numerous settings to facilitate your work. Small but sturdy, it will make bottling easier.

Maple syrup bottling machine

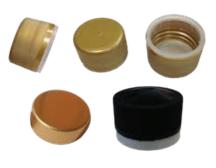

Product No. ERAEMB360 Description Industrial maple syrup bottling machine

Characteristics

 450 bottles / hour (250ml bottles) Fills and tighten Adjustable tightening strength depending on the type of cap used Adjustable table height Cap holder adjustable up to 1" Easy to clean

Instrumentation

 Adjustable liquid level Includes liquid pump Recirculation of over flow Necessitates 120V Requires a pressurized air connection Easy and simple programming
